

8 WAYS TO PROTECT YOUR HOME IN WINTER

Chimney/Fireplace

Have your chimney cleaned and checked annually by a professional.

Doors and Windows

Weatherproofing Doors & Windows - seal leaks and cracks. (25% of home heat escapes through small cracks, leaky doors and windows!)

Exterior Lighting

Sufficient outdoor lighting can help navigate your way along driveway/walkpaths and avoid slipping on icy patches.

Protect Your Pipes

A burst pipe can create a costly mess! Be sure to disconnect and drain your outside hose.

Gutters

Clean out and repair any loose gutters. Gutters unable to drain properly can cause an ice damming and water can back up into your home.

Heating System

Give your Heating System some love with an annual check up by a reputable heating company. Change your filters throughout the season for best heating efficiency.

Smoke Detectors/Carbon Monoxide

We all know we should do this: Check Your Smoke Detectors and Carbon Monoxide Detectors - TEST Them! Change Batteries !

Ceiling Fans

Flip the switch on your ceiling fan! The up draft will force the warm air down and help keep the room warmer.
